CAREER OBJECTIVE:

Motivated and detail-oriented First-Year Data Science student with a strong foundation in programming and engineering concepts. Passionate about data analysis, visualization, and innovative project development. Seeking opportunities to apply technical skills and gain practical experience in data science and related domains.

EDUCATION:

B.TECH in Data Science (FY)

[MITAOE Alandi], Maharashtra

SKILLS:

Programming Languages:

- C Language

- Python

Web Technologies:

- HTML

- CSS

Data & Visualization:

- Dashboard Creation

- Data Analysis

Tools & Concepts:

- Digital Electronics

- Problem Solving

- Basic Engineering Design

PROJECTS:

1. Bike Side Stand Indicator System (Digital Electronics Engineering)

- Designed and developed a safety system to detect side stand position.
- Prevents accidents by alerting the rider if the stand is not properly retracted.
- Applied digital electronics concepts for real-world implementation.

2. Data Visualization Dashboards:

- Created interactive dashboards to analyze and present data insights.
- Used visualization techniques such as charts, graphs, and KPIs.
- Improved understanding of data storytelling and analytics.

3. Drone Payload Attachment System:

- Designed a drone attachment mechanism for carrying payloads.
- Focused on stability, efficiency, and practical application.
- Explored basic aerodynamics and mechanical design concepts.

CERTIFICATIONS:

- Certified Course from Cisco
- Certified Course from Anthropic
- Certified Course from IBM

STRENGTHS:

- Quick Learner
- Strong Analytical Thinking
- Team Collaboration
- Innovative Mindset

EXTRA-CURRICULAR ACTIVITIES:

- Participation in technical projects and workshops
- Interest in emerging technologies like AI and drones

DECLARATION:

I hereby declare that the above information is true to the best of my knowledge.
